

Roll-Out Sheet Rack

A storage system featuring roll-out drawers for storing sheet metal and other flat products

STEEL
S STORAGE
SYSTEMS

A bundle is easily placed in a drawer with a sheet lift.

Handles Heavy Loads With Ease

The Roll-Out Sheet Rack comprises drawers that glide-out to a full extension. Each drawer has a 5,000 lb. capacity and is available in a variety of sizes up to 6' x 12'.

This battery of racks provides convenient storage adjacent to a shear.

Advantages

- Increases storage density as much as 400%.
- Saves time by providing immediate accessibility.
- Improves the handling and storing of flat material.
- Eliminates damage and unsafe storage conditions.

The drawers pull out from the floor permitting immediate access for placement and retrieval of material with a crane. Loading can be accomplished conveniently with a sheet lift, magnet, slings, or vacuum lifter. The rack can greatly compliment production machinery such as a shear, laser cutter, and press brake. It can provide a simple and inexpensive means to accomplish a manufacturing cell further enhancing productivity.

An operator uses a magnet for loading steel plates.

These fixtures are an example of what can be stored besides sheet.

This Rack Isn't Just For Sheet!

The convenience of the exposed drawers lends itself to many heavy or delicate flat products. Plates, fixtures, dies, molds and remnants are just some of the different items customers are storing in their racks.

Vacuum lifters are commonly used for retrieving individual sheets.

The roll-out drawers complement forklift handling, too.

Steel Storage Systems, Inc. is Application Oriented

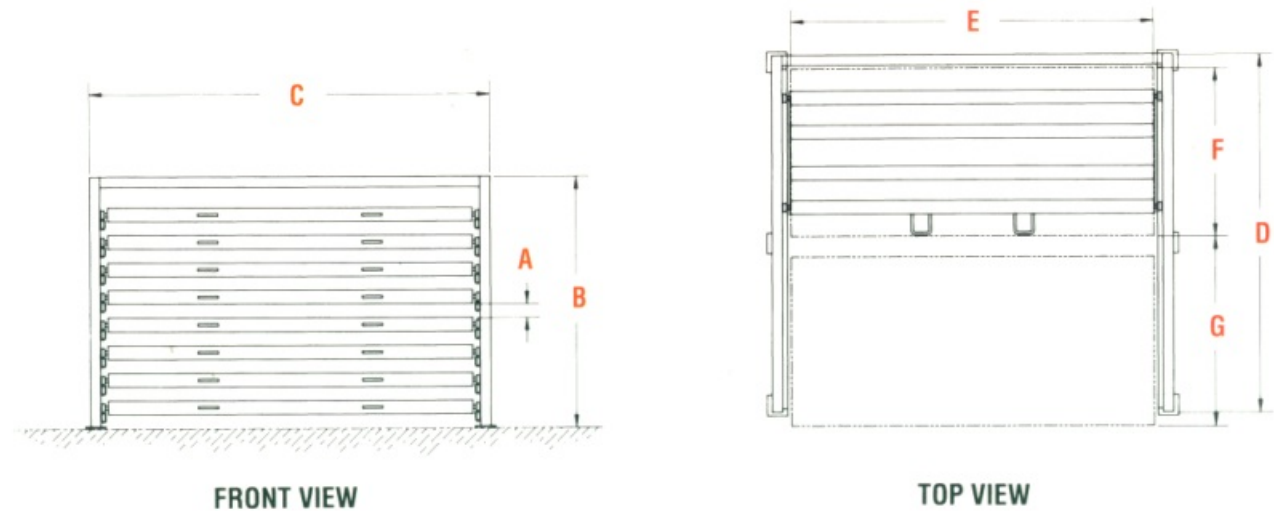

Our sales and engineering staffs have the technical skill, experience and creativity to help you solve the most difficult requests. They are at your service to analyze your application, determine your requirement and prescribe a standard system or develop a special design to satisfy your needs.
